

AMENDMENTS TO THE DRAWINGS

The attached replacement sheets are formal versions of the drawings filed with the *original application papers*. The formal drawings filed with the Response to Notice to File Corrected Application Papers on May 24, 2002 were actually formal drawings from a different case and should be discarded in favor of the attached drawings sheets.

REMARKS

Claims 1-17 are pending. Claims 1, 4, 8 and 15-17 have been amended. The specification has been amended as to a matter of form pointed out in the Office Action. Claims 1, 8 and 15-17 are the independent claims. Favorable reconsideration is respectfully requested.

As required by the Examiner, replacement formal drawings are submitted herewith to be placed in the file. The formal drawings sheets are believed to have proper margins and correspond to the drawings originally filed with the application papers. The drawing sheets submitted with the in Response to Notice to File Corrected Application Papers dated May 24, 2002 did not correspond to the present application and should be discarded in favor of the attached drawing sheets.

The specification was objected to due to an informality. The specification was amended, as shown above. The amendment is believed to obviate the objection.

Claims 1-7 were rejected under 35 U.S.C. § 112, second paragraph, as indefinite.

Claims 1 and 4 have been amended to recite an “editing and integrating unit.” It is believed that the rejection under Section 112, second paragraph, has been obviated, and its withdrawal is therefore respectfully requested.

Claims 1-17 was rejected under 35 U.S.C. § 102(b) as anticipated by U.S. Patent 6,006,241 (Purnaveja et al.).

Among the features of amended claim 1 that are not found in the cited art are the inserting unit which inserts into the image source an image marking including information that is used to display the network data synchronizing with displaying of the image source and which is extracted from the image source. Applicant submits that this feature is neither taught

nor suggested in Purnaveja et al. For at least this reason, amended claim 1 is believed patentable over Purnaveja et al.

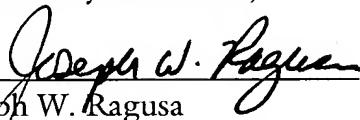

Amended independent claims 8 and 15-17 recite a substantially similar feature and are believed patentable for similar reasons.

The other claims in this application are each dependent from one or another of the independent claims discussed above and are therefore believed patentable for the same reasons. Since each dependent claim is also deemed to define an additional aspect of the invention, however, the individual reconsideration of the patentability of each on its own merits is respectfully requested.

In view of the foregoing amendments and remarks, Applicant respectfully requests favorable reconsideration and early passage to issue of the present application.

Dated: June 21, 2005

Respectfully submitted,

By
